The BELLOWS

Gotchell Wins Award In 4Cs Quarterly Digital Competition Among 300 Entries

In the top ten percent of 4Cs Quarterly images, *Sonoma Coast Sunset* by **Mark Gotchell**

With the Quarterly Digital Competition sponsored by the Columbia Council of Camera Clubs well under way for this calendar year, **Mark Gotchell** scored well in his first try competing with other Northwest clubs. This competition is open to any member of EPS who wants to compare skills with a host of other photo competitors. To give EPS members a look at Marks competition: ***All winning images for this quarter are shown in several pages in this month's issue of The Bellows.***

This competition has but three categories, two in Color (Pictorial & Manipulated) and a third for all images in Monochrome.

Congratulations Mark! Good Job.

EPS Photo Field Trip Information

First Successful EPS Field Trip

A dozen EPSers, with “*Distancing Rules*” in mind, collected separately at the designated time at Johnson Brothers Flower farm near Coburg to have fun releasing some pent up cabin fever.

This Field Trip, organized by **Carla Aguilar**, is the first to actually be successful given our constrained environment because of the national virus quarantine.

The only other photo field work to have a positive outcome that we know of is still on-going at Finley WR to keep watch on the baby coots at the Mitigation Pond on Bruce Rd., a Linn County road.

Other planned trips have been cancelled, as seen below, but many keep up hope that more planned trips (seen at right) can still have positive results later in the year.

~~Redwoods & Rhododendrons Field Trip Scheduled for June Has Been Cancelled~~

EPS officers & Board members for 2020

Officers:

President Ron Seguin
Vice-President Anne Campbell
Treasurer Kevin Reilly
Secretary Linda Magyary

Board Members at Large

Mike VanDeWalker Krystal Grube
Graham Smith Chris Baird
Jean Jensen Gary Lentsch

Committee Chairs:

Challenge Jerry Gowins
Competition Hernando Convers, *Mark Gotchall (Co-chairs)
Critiquing Terry Smith, *Jim Buch (Co-chairs)
Education Jon Parker, **Dave Horton (Co-chairs)
Photo Forum Rochelle Villanueva, *Kevin Reilly (Co-chairs)

* Non-voting position ** Votes as Recent Past President

Coast Camping
Field Trip Destination**

Bullards Beach State Park

Make your reservations now
Arrive **Fri. September 18**
Leave **Tuesday, Sept. 22**

• **What's to do?** -- Lots of day-time & nighttime photography, campfires, beach hikes, shopping, eating, etc.

• **Campground** -- If you're camping, reserve a site at Bullards Beach State Park. We reserved site 'A'11. It's big with close parking for non-camping guests. There are over 75 sites in the campground, a few left in 'A' loop. If you think you might go, **make your reservations now.**

• **Non-campers** -- there are a number of **motels in Bandon.** The closest to the campground is **Lamplighter Inn.**

• **Potluck** --

Saturday night at the campground.

• **Dinner out on Sunday** -- Location (TBA). Suggestions?

A huge turnout last year at Brookings. Everybody had a great time.

*Don't miss out on this year's trip.
We want to see you there!*

Thanks -

**Kevin Reilly &
Rochelle Villanueva**

How Many Frames Per Second? SEVENTY TRILLION! *World's Fastest Camera*

World's fastest camera that can record 70 TRILLION frames per second could capture nuclear fusion and radioactive molecule decay for the first time

70 trillion frames per second is fast enough to see waves of light travelling during radioactive molecule decay

It combines a laser that emits extremely short pulses of light that last only one quadrillionth of a second

The system could enable new research in fundamental physics, next-gen semiconductors and life sciences

Scientists say they've developed a camera that can record 70 trillion frames per second and could be used to capture nuclear fusion, radioactive molecule decay or astronomical events that are light-years away.

The 'compressed ultrafast spectral photography' (CUSP) device, which emits extremely short laser pulses, can capture waves of

light in motion, or the fluorescent delay of molecules.

A frame rate this high could also capture events that happen too fast for traditional film speeds, such as shock waves and the transport of photons – the basic unit of light – through different substances.

CUSP can take 70 trillion frames in the time it takes a person

to blink, (sic) smashing the research team's own previous record of 10 trillion a second.

The new record-breaking device could open up research in fundamental physics, next-generation semiconductors and the life sciences.
